API Contingency Concept

– Success Story –

Version Final
November 2013

Success Story (1)

Project	API Contingency Concept
Client	Boehringer Ingelheim Supply Chain & Assets End-to-End Supply Network Strategy
Contact	Dr. Peter Comes (Head of End-to-End Supply Network Strategy) Phone: +49 (0) 6132 / 77 – 93511
Key Persons	Christian Kauth (Supply Chain Management Germany) Dieter Pfeifer (End-to-End Supply Network Strategy) Dr. Annette Schönleben-Janus (Quality Oversight & BPE)
JSC	Christiane Skubch, Norbert Skubch
Duration	July – October 2013
Doc	

API – Active Pharmaceutical Ingredient

Objectives

- Systematically analyze the current API contingency concept as well as its implementation
- Identify needed adjustments with regard to
 - ... scope – what has to be safeguarded?
 - ... adverse incidents – which situations can harm the expected operation?
 - ... targets – to what extend shall precautions be taken?
 - ... measures – which provisions shall be made?

Challenges

- Developing a long-term target irrespective of given short to mid-term restrictions
- Finding the right level of detail allowing a fact based analysis without putting too much data collection burden on the organization

Deliverables

- Description and challenge of the current situation identifying its weaknesses
- Precise definition of the future API contingency scope
- Selection of adverse incidents to be considered
- Identification of relevant APIs according to BI's long-term planning and definition of targets by API
- Specification of contingency measures and recommendation of actions to be initiated short-term

Quotation

„I really enjoyed working on the project.

We had fact-based, target-driven and fruitful discussions without any emotional distractions.

Many thanks to the team and to JSC who made it happen“
